

DANTE'S INFERNO

An independent animated series

CHAPTER 01 AVAILABLE / SERIES IN DEVELOPMENT

An ancient journey. A new encounter.

DANTE'S INFERNO is a contemporary visual interpretation inspired by Dante Alighieri's *Divine Comedy*. Built for the vertical screen, it follows a journey through fear, doubt and resolve, with gothic architecture, engraved textures and pale, sculptural characters brought to life.

Created and directed by Cesar Maldonado in Copenhagen, the project combines human artistic decisions with AI-assisted image making, animation, synthetic narration and generated music. Each scene is selected, revised and edited to serve the story.

An independent artistic interpretation, developed as an ongoing series.

Help shape the next chapter.

The next step is to continue the series with the same visual coherence and a sustainable production process. Conversations are welcome in three areas:

01 Cultural dialogue

Digital presentation, discussion of the Divine Comedy or literary guidance on the adaptation. A written exchange or recorded presentation can be developed around the interests of a cultural organisation.

02 Production support

Funding, tools or production resources for a defined stage of the series. A proposal would specify the creative aim, scope, intended use and any agreed acknowledgement.

03 A commissioned visual study

A carefully scoped visual experiment using the language and production methods demonstrated by the project. The brief, feasibility, schedule, fees and permitted uses would be agreed for each collaboration.

A transparent creative process

The work is directed through reference development, generation, comparison, revision and editing. Selected tools used in the project include OpenAI tools, Wan through ComfyUI, and ElevenLabs. These names describe the production process; they do not imply sponsorship or endorsement.
